Functional and non-functional requirement from the lessor's perspective

Functional-

- Log in – should be able to log in. If no account create an account. When going on login page there should be an option to click if no existing account.
- Upload car information- have a tab for where the cars can be listed and upload the pictures of the car. Both describe the car and have check boxes.
- Set price - The lessor should have the freedom to choose the pricing. Some days might be higher rates than others.
- Have a tab to upload pictures of the milage and gas at the time of the car transfer. This way if there are any issues in the future it doesn't become a "he said/they said situation".
- Calendar for availability.
- Inbox- where the members can communicate. A lessee can send request to rent the car and the lessor can accept or deny.
- payment- The lessor can register where the money will be sent to.
- Overview of cars listed and rented out.
- A rating section to be able to rate the lessee. And vice versa.
- Manage profile- Editing profile or deleting.

Non-functional:

- Security- there should be two-factor authorization to make sure the person is who they say they are.
- Universal design- the content should be available to everyone regardless of functional capacity.
- GDPR- follow GDPR guidelines. Accept or decline recommended cookies. Change the cookies.
